

Developing a Hospital Intranet

- Reorganized 8 volumes, over 800 pages of administrative procedures, into an intranet for a hospital, including these tasks:
 - o Mapped the material
 - o Created online procedures for their intranet
 - o Created 80+ electronic forms/online versions so that the users can complete the forms online (beyond the scope of the project)
- Created emergency links on the homepage for faster response times
- Tested it successfully with doctors who had never used an intranet
- Finished the project on time and under budget
